

design **M30x1.5**

dif. refl. sensors measuring / sensing range **150 ... 3500mm**

- ✓ large measuring range
- ✓ current or voltage output and 2 switching outputs
- ✓ easy setting via teach-in button and LED-displays
- ✓ high sound intensity
- ✓ selectable normally open and normally closed function

**teachable analog output range  
as well as 2 PNP switching outputs**

#### description

**ipf** ultrasonic sensors operate as non-contact position switches and/or position meters. The distances are determined by the echo-propagation time process. The temperature compensated propagation time measurement enables a very exact detection of position over a wide temperature range for sound reflecting objects of any color or material.

The use of a microprocessor makes the ultrasonic sensor insensitive to interference.

The devices have an analog voltage output (0 ... 10V) or a current output (4 ... 20mA) and two additional pnp outputs, their switch-points can be chosen freely.

The start and end of the analog range is defined by the teach-in process of the two corresponding switch-points, depending on whether the characteristic line should be positive or negative. The switching characteristic of the normally closed (nc) or normally open contact (no) can also be programmed in this way.

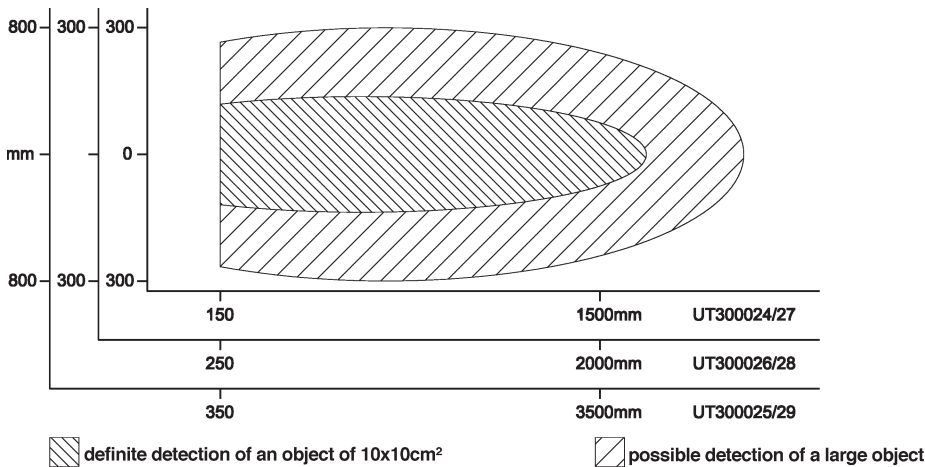

The start and the end of the analog range can be set independently of each other using a teach-in button. These endpoints define the position of the switch-points. Three LED displays facilitate simple programming.

#### application examples

- ▶ filling level measurement of bulk materials and liquids
- ▶ measurement of heights, e.g. packages on conveyor belts, pallets or piles
- ▶ distance measurement, e.g. for driverless vehicles
- ▶ detection of optically non-recognizable materials
- ▶ cloth width or foil winding and unwinding control
- ▶ detection of thicknesses and diameters
- ▶ regulation of material tension by way of slack measurement
- ▶ goods positioning in automatic storage systems
- ▶ linear measurement systems for several objects

### detection ranges of the ultrasonic sensors

### connection

**wire colors:** bn = brown (1), wh = white (2), bu = blue (3), bk = black (4), gr = grey (5)

### analog characteristic curve

The response curve is invertible when teaching the sensor.

### operator's controls

This data sheet contains the standard versions only. Kindly request the availability of other output- and connection functions.

We will be pleased to supply the matching cable socket for your devices with connector. Please refer to the list in catalog chapter "accessories" under "cable sockets **ipf-SENSORFLEX®**" or search our website for "VK".

**Warning:** Never use these devices in applications where the safety of a person depends on their functionality.
